Art Unit: 2876

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Cordano et al 3,426,337. Cordano discloses a disc provided with a reference pattern (col 2 lines 59-60); digital data is recorded on, or reproduced from a pattern of a plurality of concentric data tracks on the disk, each or the tracks located at a radial distance from a reference point on the disk and an address register responsive to the address data from the data processing system provides digitally encoded electrical signals representing desired track addresses for the data transducer assembly (col 3 line 69 – col 4 line 6), i.e. creating a table of coordinate data from a scanned reference pattern; binary address desired for the transducer are used to control a comparator system for the correction of transducer position (col 3 lines 20-25), i.e. calibrating the gain of a fine actuator based on the coordinate data. See also figure 1.

3. Claims 2-9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. Claims 10-19 are allowable over the prior art of record.

5. Claims 20-27 remain withdrawn but must be cancelled before
